

Important information regarding crampons with plastic bindings **BATCH N° 7/12.**

We have been reported about a few rare cases of plastic bindings that have broken unexpectedly. Front binding (toe side) and / or rear binding (heel side). Such breakage irreparably affects the normal and proper use of the "CRAMPON". The evidence of an even slight risk of breakage of the bindings makes the device itself unsuitable for use.

The plastic bindings potentially involved are identified by the BATCH N° 7/12. If you identify the BATCH N° 7/12 on your bindings, immediately stop using the crampons. Send us back the crampons either through the shop where you bought them, our distributor or directly to Climbing Technology as indicated here below.

The batch number is identified by a circle in which an arrow indicates the month of production (months are indicated with numbers from 1 to 12) and two central digits indicating the year of manufacture. Pictures showing the position and format of the **BATCH N° 7/12** are enclosed hereinafter.

BATCH N° 7/12

Front binding

Rear binding

Who is in possession of a pair of crampons included in the following list must, either personally or with the help of the Dealer or Distributor, check about the manufacturing Batch N°.

NEVIS	NUPTSE CLASSIC	NUPTSE SEMIAUTOMATIC	NUPTSE EVO CLASSIC	NUPTSE EVO SEMIAUTOMATIC
